

Db2 SQL Workshop

Duration: 2 Days

Prerequisites:

- Basic computer literacy
- Basic editing skills
- Database skills are not required DB2 Fundamentals

Course Description:

This course provides an introduction to the SQL language and applies to DB2. This course is appropriate for customers working in all DB2 environments, that is, z/OS, Linux, UNIX, and Windows.

Target Audience:

Everyone needing to write, support, or understand SQL queries. This includes but is not limited to endusers, programmers, application designers, database administrators, and system administrators who do not yet have knowledge of the SQL Data Manipulation Language DML).

Course Outlines:

- Code SQL statements to retrieve data from a DB2 table, including the SELECT, FROM, WHERE, GROUP BY, HAVING and ORDER BY clauses
- Code inner joins and noncorrelated subqueries
- > Use SQL arithmetic operations
- Use scalar and column functions
- > Use UNION and UNION ALL
- ➤ INSERT, UPDATE and DELETE rows
- Code simple CREATE TABLE and CREATE VIEW statements
