(EDU-220) Panorama: Managing Firewalls at Scale

Duration: 2 Days

Prerequisite:

Students must have completed the Firewall Essentials: Configuration and Management (EDU-210) class. Students must be familiar with Palo Alto Networks Next-Generation Firewall management and basic networking concepts, including routing and IP addressing.

Course Description:

- Learn how to configure and manage the next-generation Panorama management servers
- Configure templates (including template variables) and device groups and gain experience with administration, log collection, and logging and reporting
- Gain familiarity with planning and design considerations for Panorama deployment

Course Objectives:

This course helps participants gain in-depth knowledge on configuring and managing a Palo Alto Networks Panorama management server. Administrators who complete this course become familiar with the Panorama management server's role in managing and securing the overall network. Network professionals learn how to use Panorama aggregated reporting to provide a holistic view of a network of Palo Alto Networks next-generation firewalls.

Intended Audience:

Security Administrators, Security Operations Specialists, Security Analysts, Security Engineers, and Security Architects

Course Outlines:

- Initial Configuration
- Adding Firewalls
- Templates
- Device Groups
- Log Collection and Forwarding
- Using Panorama Logs
- Panorama Administrative Accounts
- Reporting
- Troubleshooting
