

IBM Workload Scheduler 9.4 Administration

Duration: 2 Days

Prerequisites:

Before taking this course, make sure that you can use a web browser and the UNIX or Linux shell to run basic commands and browse the file system.

Course Description:

This course teaches the administrative functions necessary to plan, install, configure, maintain, and troubleshoot an IBM Workload Scheduler 9.4 network. This course includes an in-depth look at designing an IBM Workload Scheduler network architecture, background processes in Workload Scheduler, workstation and network configuration options, workload production cycle and processing, effective use of Workload Scheduler security, and techniques for Identifying and resolving common problems. Hands-on lab exercises include planning a network, defining workstations and domains, and installing and configuring Workload Scheduler components.

Target Audience:

New IBM Workload Scheduler administrators who seek proficiency in Workload Scheduler 9.4. Existing administrators, installers, and support personnel who are converting software from previous versions to Workload Scheduler 9.4. Anyone needing detailed guidance on designing Workload Scheduler networks, managing background process, security, configuration, and backups.

Course Outlines:

- Describe the workstations
- Describe the components and their interactions
- Plan a Workload Scheduler network for your organization
- Install and configure the components
- Upgrade a workstation to the latest version
- Customize how jobs run
- Manage how users are authenticated and authorized to use Workload Scheduler
- Demonstrate the daily planning functions
- Diagnose and troubleshoot problems with Workload Scheduler
