Leadership in Project Management for Development Managers

Duration: **8 Half Days**

Course Description:

The success of a project is heavily dependent on the competence of the project manager. As the world navigates through the COVID-19 pandemic, project leaders find themselves needing to adopt new ways of leading, originating, and executing projects to a successful completion. Regular business tools no longer apply, and project managers need to innovate and proactively respond to unprecedented challenges.

The Leadership in Project Management for Development will develop a project leader's adaptive skills and provide significant solutions for real-time business problems. Participants from both public and private sectors will learn how to navigate through the new reality, equipped with the proper perspective to understand business trends and directions. Participants will also learn techniques on how to retool and apply proven as well as innovative ideas, develop broader skills, and look at the business from a viewpoint that redefines proficiencies in project management.

Course Objectives:

The program aims to develop the participants' leadership competencies in project management and equip them to create adaptive and responsive strategies.

Target Audience:

This program is highly recommended for Project Managers, Development Practitioners, Project Analysts, Specialists, Project Implementation Officers, Project Supervisors, Development Administrators, and Project planners.
