

Cortex XSOAR: Engineering Security Automation Solutions

Duration: 4 Days

Course Description:

The Palo Alto Networks Cortex XSOAR: Engineering Security Automation Solutions course is a four-day instructor-led training with a blend of lectures and hands-on labs. This training will enable students to use Cortex XSOAR to:

- Conduct incident investigation and response activities on a phishing campaign
- Create custom dashboards and generate reports
- Install multiple engines and configure a load balancing group
- Use built-in and external integrations to ingest incidents and automate security processes
- Plan and implement an automation use case by building playbooks and automation scripts

Target Audience:

- SOC / SIEM / Automation Engineers
- MSSPs and Service Delivery Partners working with XSOAR

Prerequisites:

Participants should have a basic understanding of:

- Networking concepts, such as identifying private IPs and domains
- Cybersecurity concepts, such as Indicators of Compromise
- Navigating Windows and Linux environments using the GUI and CLI

Course Objectives:

Successful completion of this course should enable students to integrate their existing security tools with Cortex XSOAR to streamline security processes, accelerate security outcomes, and automate manual security-oriented tasks.

Course Outlines:

- Course Introduction
- XSOAR Overview
- Incident Management
- Threat Intelligence
- Analyst Investigations
- Dashboards, Reports, and Timers
- Integrations and Content Management
- Architecture
- Use Case Planning and Implementation
- Playbook Development
- Automation Scripts
