

SAFe® AI-Empowered Product Owner/Product Manager (6.0)

Duration: 2 Days

Course Description:

This course will strengthen your understanding of product owner and manager responsibilities in a distributed team setting. The SAFe® AI-Empowered Product Owner/Product Manager (6.0) certification course will teach you a customer-centric approach guided by the Scaled Agile Framework®, allowing you to achieve higher-quality outcomes in less time.

In addition, you will gain valuable insights on topics like daily PO/PM roles, working with engineering teams and stakeholders, epics/features/stories, and designing/prioritizing/building/testing/delivering products.

Target Audience:

- Product Managers and Product Owners
- Business Owners and Business Analysts
- Solution, Program and Portfolio Managers, and Process Leads
- Enterprise, Solution, and System Architects

Course Objectives:

- Refine Features into Stories.
- Manage Program and Team backlogs.
- Articulate the Product Owner and Product Manager role.
- Represent Customer needs in Program Increment Planning.
- Execute the Program Increment and deliver continuous value.
- Collaborate with Agile teams in estimating and forecasting work.
- Connect SAFe Lean-Agile principles and values to the PO/ PM roles.
- Decompose Epics into Features and decompose Features into Stories.
- Use AI for smarter backlog refinement and customer-centric product decisions.

Course Outlines:
